

#QAC – Quiet-As-Carbon

#QAC-Rollers are Steel Rollers

- Optimized design
- Optimized Machining-
and Balancing Technology
- Can be permanently operated
in a semi-critical speed range

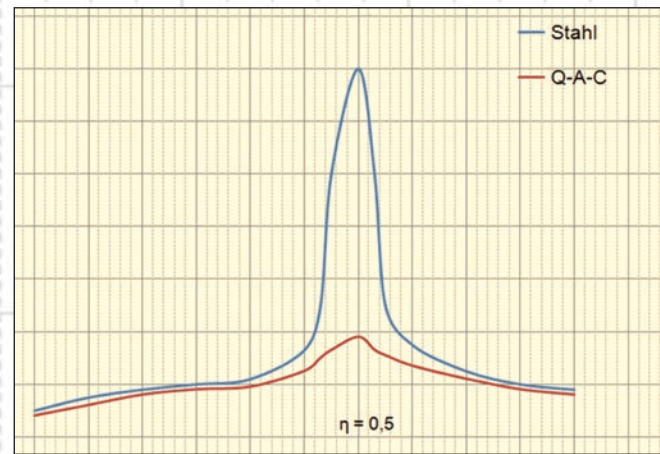

#QAC – Quiet-As-Carbon

- Steel Rollers which can be operated permanently in the so-called semi-critical Range due to an Optimized Construction
- The Semi-critical Speed is a Reciprocal Function of the Natural Deflection

„With the #QAC rollers we reach positions in the machine which previously had to be replaced by fiber composite technology due to an Eta of 0.45-0.55.

The benefits of #QAC technology in these applications are the same smooth operation as with fiber composite technology rollers, but with a much higher resistance to failure, as diverse risks are eliminated.

All of this at a very attractive price level.“

Engineered Rollers
