

## Thermofixing and Stretching Machines

For technical textiles, such as

- Airbag fabrics
- Blankets
- Filter fabric
- Conveyor belts
- Oil- or steamheated layout
- Turnkey  
Inline-/Offline-System

## Thermofixing and Stretching Equipment for dimensional Fixing and Stabilization of Technical Textiles

### Features/Performance data

- Defined targeted stretching or shrinking of web-shaped goods from roll to roll
- Defined stretching or shrinking in the direction of travel
- Stretching in consideration of the wide jump
- Optimum contact area of the product on steam-heated or thermo-oil-heated rolls
- Ideal equipment also from shift-sensitive materials
- Individual cascadable adjustable process temperatures
- Energy-saving and efficient process

### Options

- CKS insulation housing and energy recovery
- Residual moisture measurement
- Product temperature measurement in the process
- Different winder concepts
- Cooling cylinder, integrated or in separate frame
- Steam generator and cooling system concepts or thermal oil and cooling system concepts
- Electric control with visualization
